GREEN CAP NETTING

**GREEN CAP NG proven reliability
throughout the world saving time and money**

**High Tensile Strength makes excellent bales time after time
giving minimum net usage roll after roll**

GREEN CAP NG

The Green Cap® NG system makes the installation of the net wrap easy. The net goes smoothly in the right direction at once. This eliminates unnecessary lifting. The green marking on the net indicates the right direction of rotation.

EASY LIFTERS

Easy lifters are carry handles which make lifting the roll easy and ergonomic. The lifters are quick to remove and they can be recycled.

SUPERCORE

Light rain is not a problem for this core that retains its reliability also in difficult conditions. Thanks to SuperCore, the cores will no longer stick in the trays. Inside each core, there is a unique quality control number according to which the production time can be identified.

DOUBLE PALLETIZING

The net wrap rolls are always packed on two pallets, which are placed on top of each other and wrapped with plastic. The pallets can be easily separated for transport or warehousing.
